

Which raw metrics actually predict ARI?

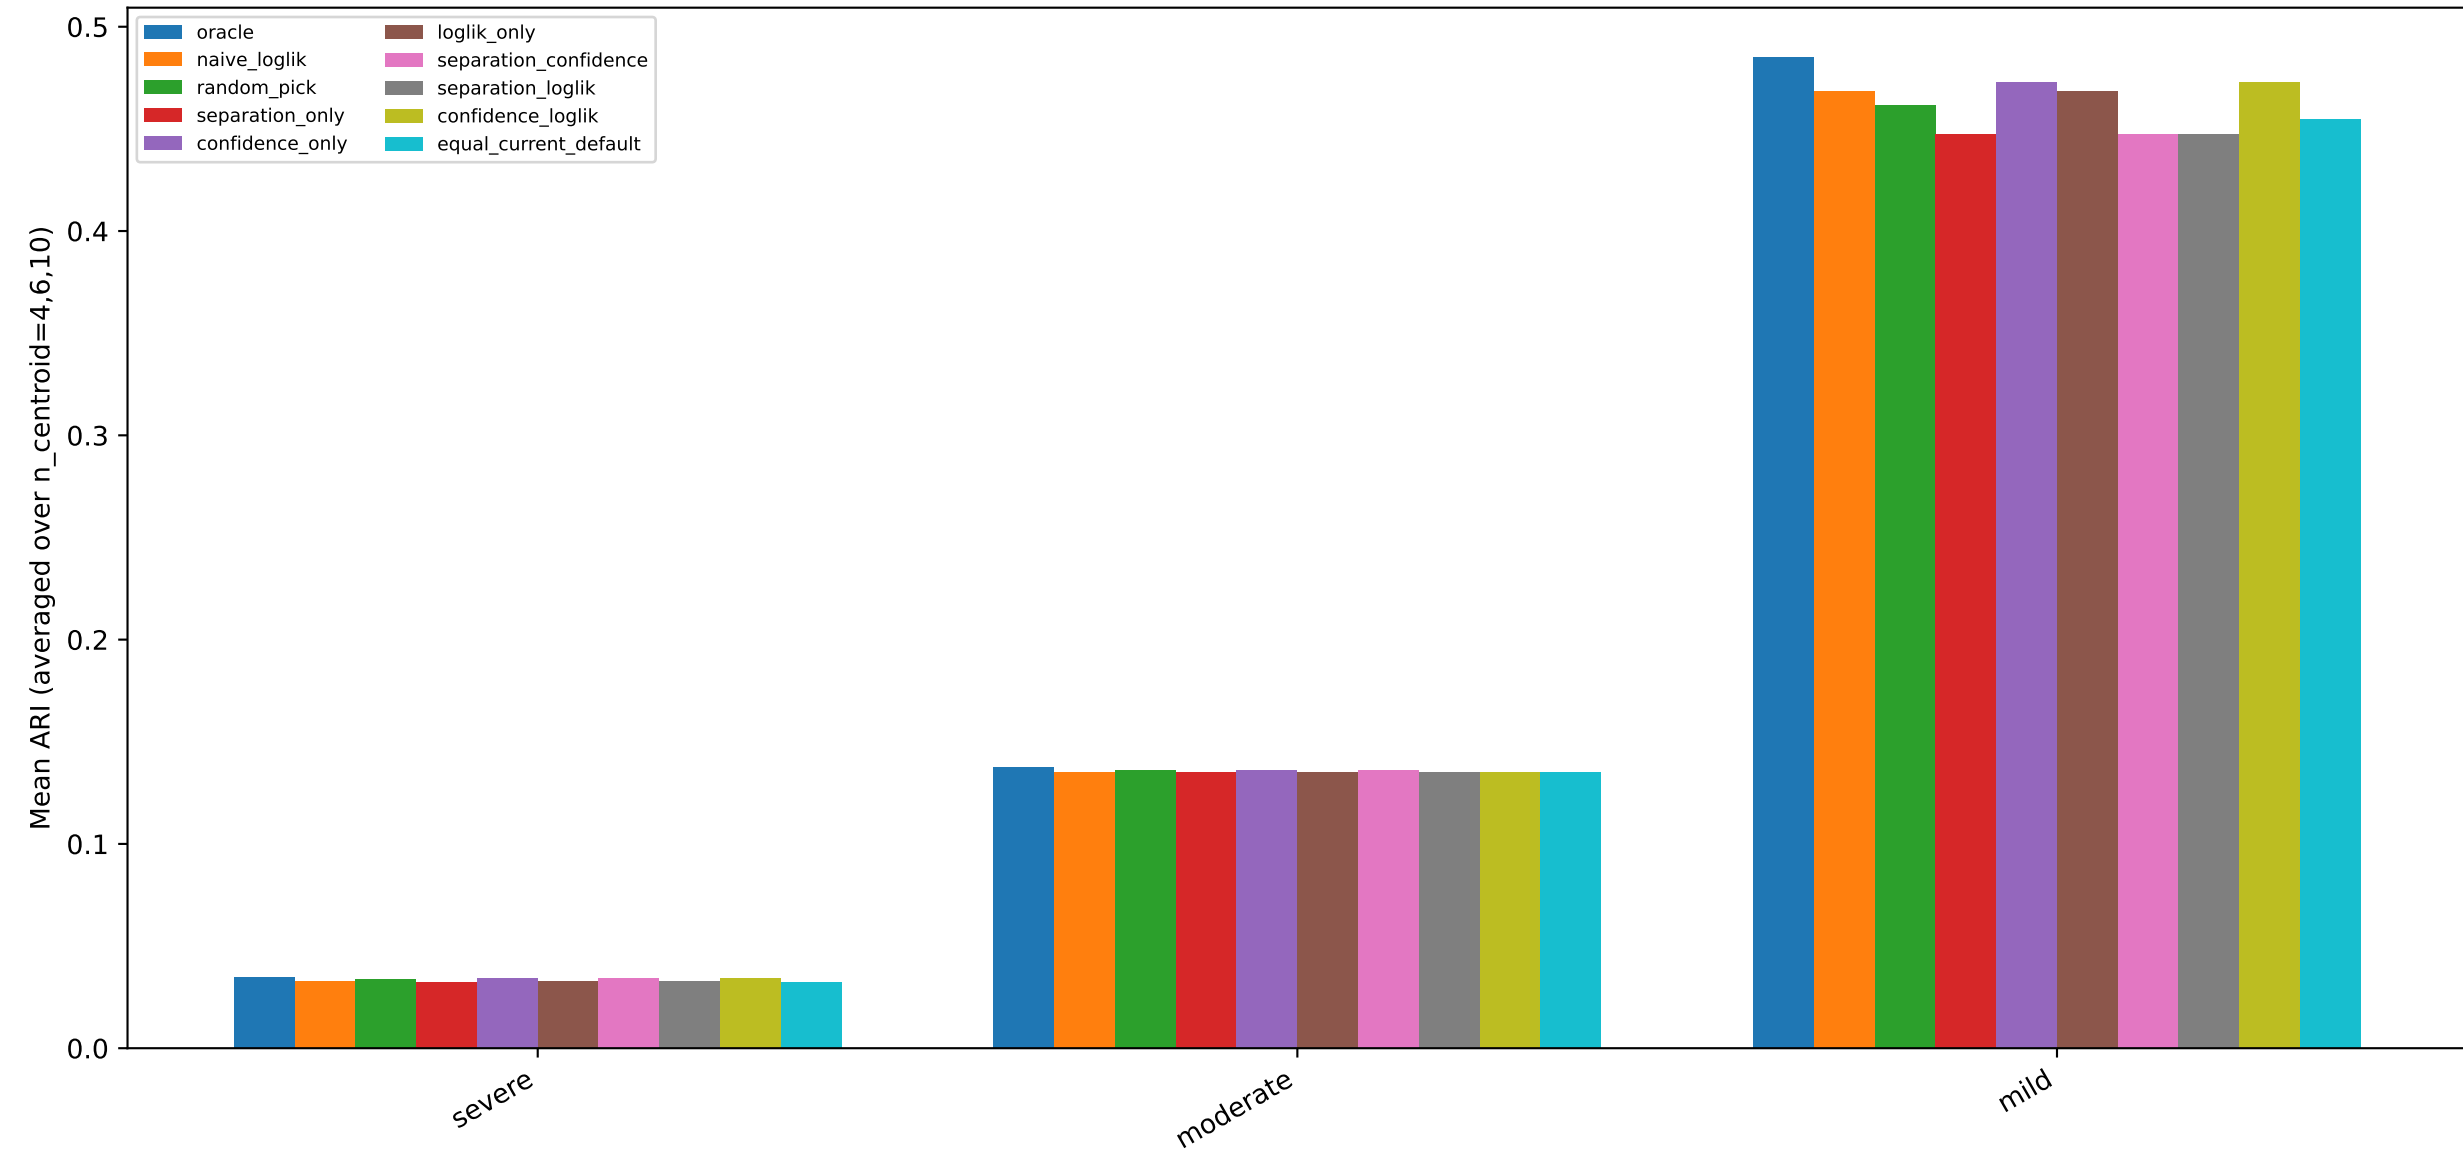

Metric value vs. ARI, per candidate (240 candidates, colored by stress config)

Selection strategy vs. oracle / random baselines

Strategy ARI by stress config — where does the metric choice matter?

Metric selection summary

Metric → ARI correlation ranking (pooled, $|\rho|$ descending):

assignment_confidence	$\rho=+0.446$	$p=1.1e-05$
separation	$\rho=+0.340$	$p=1.0e-03$
min_weight	$\rho=+0.262$	$p=1.3e-02$
cov_health	$\rho=+nan$	$p=nan$
log_likelihood	$\rho=-0.154$	$p=1.5e-01$

Top 3 selection strategies by pooled mean ARI:

oracle	mean ARI=0.2192
confidence_only	mean ARI=0.2144
confidence_loglik	mean ARI=0.2142

oracle	mean ARI=0.2192	(upper bound)
random_pick	mean ARI=0.2104	(lower bound)
